

# Global Alcohol Consumption and Economic Indicators Dashboard

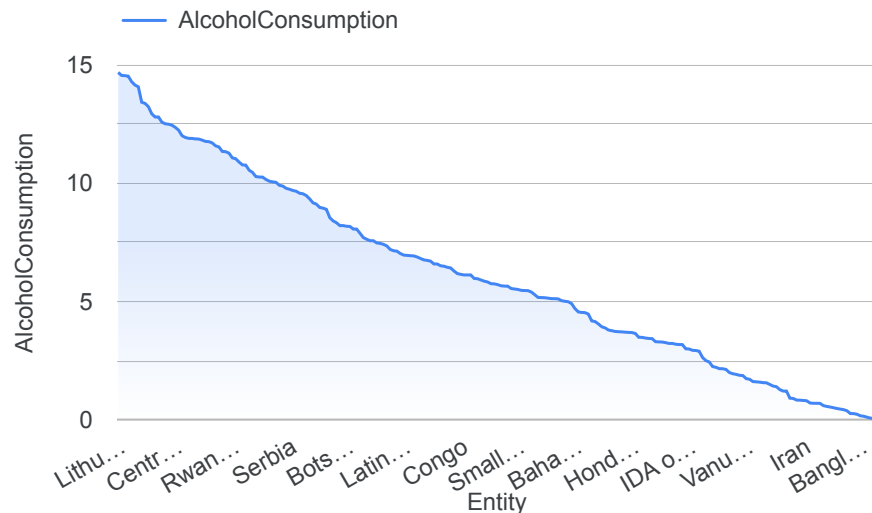

**Description:** This dashboard provides an overview of global alcohol consumption trends in relation to economic indicators, based on data from 2000 to 2018.

**Key Insights:**

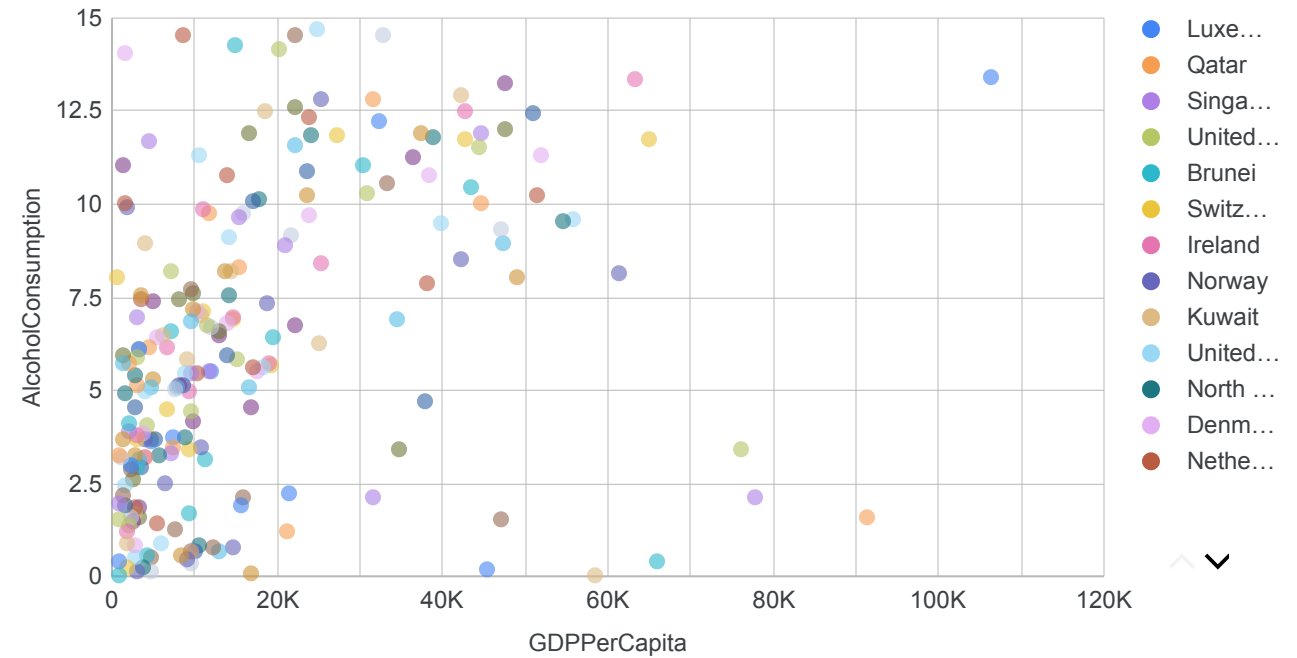

- Some countries show increased consumption, while others remain constant or decline.
- Alcohol consumption vs. GDP per capital shows a scatter plot reveals no clear correlation between a country's GDP per capital and its alcohol consumption. High GDP countries can have both high or low consumption.
- Top alcohol-consuming countries a column chart highlights the countries with the highest recorded alcohol consumption. This helps identify which regions are most affected by this trend. Example: Countries like Lithuania, Moldova, and Russia are among the top.
